

Heat Transfer Kit

New Zealand's most trusted ventilation brand

Keep your whole house warm and comfortable by moving precious heat throughout your home.

When the room you have your wood fire or primary heat source in, reaches your preferred temperature, this system shares the excess heat around your home. This ensures sustainable and efficient use of energy in your home.

British made fan

Compact and robust polymer construction and can be mounted at any angle with the universal mounting bracket supplied.

Adjustable outlet valve

Easily adjust airflow into each room or simply close, if the room is not in use.

Siemens thermostat controller

When your lounge exceeds your preferred temperature the thermostat controller will automatically start to transfer excess heat to the other rooms in your home.

Egg crate inlet

Square 150mm inlet for 1 and 2 bedroom kits

Round 200mm inlet for 3 and 4 bedroom kits

All kits come complete with insulated ducting, inlets and outlet, duct tape and the controller required for installation. Fan must be installed by a qualified electrician.
